

Advantage Plus Incorporated

Concrete Mix (suggested)

Everyone has a different concrete mixture depending on the area their company is located in. Our company is based in the middle of the United States where it freezes and thaws throughout the winter. Therefore We set our mixes to handle freezing temperatures.

By the Gallon the breakdown is the following:

5 Gallon– Sand Medium

5 Gallon–Stone 5/16”-3/8” Chip Rock

2 Gallon Portland Cement

Water– enough to keep mix from sticking to sides of the mixer.

Mix all ingredients for 5 minutes & then pour into your prepared mold.

You may want to talk to your local ready mix plant about their suggestions. They should know the best mix for you area.

Good Luck!

Contact us if you have any questions.
